

# Contents

## 1. Discrete Structures and Optimization ..... 3–72

Mathematical Logic .....	3
Predicate Logic .....	4
Propositional Equivalences .....	4
Normal Forms .....	5
Predicates .....	5
Quantifiers .....	6
Nested Quantifiers .....	6
Rules of Inference .....	6
Set Operations .....	6
Relations .....	7
Partial Orderings .....	10
Counting, Mathematical Induction and Discrete Probability .....	11
Pigeonhole Principle .....	11
Permutations and Combinations .....	11
Permutations with Repetitions .....	13
Combinations .....	13
The Inclusion-Exclusion Principle .....	15
Mathematical Induction .....	16
Probability .....	16
Group Theory .....	17
Subgroups .....	21
Quotient Group .....	22
Isomorphism of Groups .....	23
Homomorphisms of Groups .....	24
Automorphism of a Group .....	25
Rings .....	25
Integral Domains, Fields, Division Rings .....	26
Integral Domains .....	27
Fields .....	27
Applications of Group Theory .....	28
Graph Theory .....	29
Simple Graph .....	29
Multigraph .....	30
Weighted Graph .....	30
Paths and Circuits .....	30
Shortest Paths in Weighted Graph .....	30
Shortest Path Algorithm .....	31
Eulerian and Hamiltonian Graph .....	31
Planner Graph .....	31
Graph Theory - Coloring .....	31
Trees .....	32
Prefix Codes .....	33

Tree Traversals .....	33
Spanning Trees .....	34
Boolean Algebra .....	35
Boolean Functions and Truth Tables .....	36
Simplification of Boolean Functions .....	39
Optimization .....	42
Linear Programming – Graphical Solution .....	43
Simplex Method .....	44
Dual Simplex Method .....	45
Sensitivity Analysis Linear Programming Simplex Method .....	46
PERT/CPM .....	48
CPM .....	51
Critical Path Calculations and Resource Levelling .....	52
● Objective Questions .....	53

## 2. Computer System Architecture ..... 73–122

Digital Logic Circuits and Components .....	73
Digital Computers .....	74
Logic Gates .....	74
Combinational Logic Design .....	77
Karnaugh MAP Simplification .....	78
Combinational Circuits .....	79
Flip-Flops .....	80
Sequential Circuits .....	81
Multiplexer .....	81
Asynchronous Counter .....	83
Hardwired Central Unit .....	84
Data Representation .....	84
Number Systems and Conversion .....	84
One's Complement Representation .....	85
Two's Complement Representation .....	85
Complement's Arithmetic (Signed) .....	87
Fixed-Point Representation .....	88
Floating Point Representation .....	88
Error Detection & Correction .....	89
Register Transfer and Micro-Operations .....	89
Bus and Memory Transfers .....	89
Basic Computer Organization and Design .....	89
Stored Program Organisation .....	90
Timing and Control .....	91
Instruction Cycle .....	91
Memory-Reference Instructions .....	92
I/O (Input/Output) .....	93

Interrupt .....	94	Global Structure .....	134
Programming the Basic Computer .....	94	Argument Passing .....	135
Categories of Languages .....	95	Basics of File Handling in C .....	135
1. Machine Language .....	95	Command Line Arguments In C/C++ .....	136
2. Assembly Language .....	95	Preprocessors .....	136
Assembler .....	95	Object Oriented Programming Concepts .....	136
Elements of a Programming Language .....	96	Object .....	138
Microprogrammed Control .....	96	Instantiation .....	138
Central Processing Unit (CPU) .....	97	Inheritance .....	138
Stack Based CPU Organization .....	97	Encapsulation .....	140
Instruction Format .....	97	Abstract Classes in C++ .....	140
Addressing Modes .....	97	Polymorphism .....	140
RISC and CISC .....	97	Programming in C++ .....	141
Pipeline and Vector Processing .....	98	Enumerated Data Type .....	142
Pipelining .....	98	Variables .....	143
Vector Processor Classification .....	98	Constants .....	144
Array Processors .....	99	Operator .....	144
Input-Output Organization .....	99	Control Statements .....	145
I/O Interface (Interrupt and DMA Mode) .....	99	Functions Parameter Passing .....	145
Mode of Transfer .....	100	Virtual Function in C++ .....	146
Asynchronous Serial Data Transfer .....	100	Class .....	146
Serial Communication .....	100	Arrays of Class Objects .....	147
Memory Hierarchy .....	100	Constructors and Destructors .....	149
Main Memory .....	100	Overloading Constructor with Array of	
Auxiliary Memory, Associative Memory .....	101	Class Objects .....	151
Cache Memory .....	102	Overloading in C++ .....	152
Multiprocessors .....	103	Templates .....	152
Interconnection Structures .....	104	Function Templates .....	152
Interprocessor Arbitration .....	104	Exception Handling .....	153
Inter Process Communication .....	105	Special exception Handling Functions .....	155
Synchronization in Interprocess		Event Handling in Native C++ .....	156
Communication .....	105	C++ Files and Streams .....	157
● <b>Objective Questions .....</b>	<b>106</b>	Multifile Program in C .....	157
<b>3. Programming Language and</b>		HTML .....	158
<b>Computer Graphics .....</b>	<b>123–211</b>	DHTML .....	162
Programming Language Concepts .....	123	XML .....	163
Paradigms and Models .....	124	Scripting .....	165
Computer Programming – Environment .....	126	Java .....	166
Programming Language Syntax .....	127	Servlet .....	169
Stages in Translation .....	128	Applets .....	172
Elementary Data Types Properties of		Computer Graphics .....	178
Types and Objects .....	128	Display System : Video Device	
Scalar and Composite Data Types .....	128	Information .....	179
Programming in C .....	129	Display Technology .....	180
C Tokens .....	129	Multi-scanning Monitors .....	181
Identifiers .....	130	Raster Displays .....	184
Data Types in C .....	130	Input Device .....	185
Primary Data Types .....	130	Line Generation Algorithm .....	186
Sequence Control .....	131	Midpoint Ellipse Drawing Algorithm .....	187
Control Over Subprograms .....	131	Scan-Line Polygon Filling Using	
Arrays .....	131	Open in C .....	187
Structures and Unions .....	132	Boundary Fill Algorithm .....	187
String .....	132	Flood Fill Algorithm .....	188
Pointer .....	133	2D Geometrical Transformations .....	188
Functions .....	134	Translation .....	188

Rotation .....	188	<b>5. System Software and Operating System ..... 261–344</b>	
Scaling .....	188	System Software .....	261
Reflection .....	188	Assembly Language .....	261
Shear .....	188	Compilation and Compilers .....	262
2D Transformations .....	189	Loading .....	264
2D Rotation .....	189	Linking .....	265
Composition of Transformations .....	190	Relocation .....	265
Viewing in 3D .....	191	Macros .....	265
Geometric Modelling .....	191	Debuggers .....	266
Polygon Surfaces .....	192	Operating System .....	267
Computer Graphics Curves .....	192	System Calls .....	267
Bezier Curves .....	193	Evolution of Operating System .....	268
Polygon .....	193	Multiprogramming .....	270
Viewing & Clipping .....	194	Operating System Structure .....	270
● <b>Objective Questions .....</b>	<b>194</b>	Process Management .....	271
<b>4. Database Management Systems ..... 212–260</b>		Process Concept .....	271
Traditional File Oriented Approach .....	212	Process Implementation .....	272
The Database Approach .....	213	Processor Scheduling .....	272
Advantages and Disadvantages of Database Management System .....	214	Scheduling Algorithms .....	274
Database Models and their Implementation .....	215	Basic Concepts of Inter-process Communication and Synchronization .....	276
DBMS Components and Architecture .....	216	Semaphores .....	276
External Level or Subschema .....	218	Multiprogramming with Fixed Partition .....	279
Mapping Between Different Levels .....	218	Multiprogramming with Dynamic Partitions .....	281
Entity-Relationship (E-R) Model .....	218	CPU Scheduling .....	282
Relationship Between Entity Sets .....	219	Scheduling .....	282
Advantages and Disadvantages of Relational Approach .....	222	Scheduling Criteria .....	283
Concepts of a Relational Model .....	224	Scheduling Algorithms .....	283
The Relational Algebra .....	224	Banker's Algorithm for Deadlock Handling .....	284
SQL .....	225	Deadlocks .....	285
The Data Definition Statements .....	226	Memory Management .....	287
Select Delete Insert Update .....	226	Swapping .....	288
Data Manipulation .....	228	Paging .....	288
Data Definition Facilities .....	228	Segmentation .....	290
Normalization .....	230	Demand Paging .....	292
Functional Dependency .....	230	Storage Management .....	292
Anomalies in a Database .....	231	Disk Organisation .....	295
Decomposition .....	231	Disk Space Management Methods .....	295
Properties of Normalised Relations .....	232	Disk Scheduling .....	298
Query Processing .....	236	File Protection .....	299
Transactions .....	237	Data Organization .....	301
Concurrency .....	237	File Operations .....	302
Schedules and Recovery .....	237	File System .....	304
Distributed Databases .....	239	File Structure .....	306
Object Oriented Model .....	241	Network Security .....	307
Promises of Object Oriented Systems .....	243	Cryptography .....	311
Data Warehousing .....	246	Parallel Virtual Machine (PVM) .....	311
Data Mining vs. Data Warehousing .....	246	Data Virtualization .....	312
Data Mining .....	247	Unix Operating System .....	312
Big Data Systems .....	248	Text Processing .....	313
● <b>Objective Questions .....</b>	<b>252</b>	File Monitoring .....	315
		Multiprocessing Operating System .....	319

Distributed Operating System .....	322	Static and Dynamic Memory Allocation .....	414
The Kernel .....	323	Basic List Operations .....	417
System Management Components .....	323	Other Types of Linked Lists .....	420
Distributed Computing Models .....	324	Trees .....	421
● <b>Objective Questions</b> .....	<b>325</b>	Binary Trees .....	423
<b>6. Software Engineering</b> .....	<b>345–399</b>	Graphs .....	426
Software Engineering .....	345	ADT of Graph .....	428
Software Process .....	345	Sorting .....	429
System Development Life Cycle (SDLC) .....	346	Divide and Conquer Methods .....	433
Software Development Modes .....	347	Searching Techniques .....	435
Software Development Process .....	350	Reordering a List for Maximum Efficiency .....	437
Software Project Management .....	351	Dynamic Programming .....	439
Quality Function Deployment (QFD) .....	351	Backtracking .....	439
Guiding Principles Propounded by Davis		Branch and Bound .....	440
for ‘Requirements Engineering’ .....	352	Lower Bound Theory .....	441
Basic Software Requirements .....	353	NP-Complete Program .....	441
Structured Analysis .....	354	NP-Naming Convention .....	442
Primary Objectives of the Analysis		NP-Complete Program .....	442
Model .....	355	Definition of NP-Completeness .....	442
Software Requirements Specification		NP-Complete Problems .....	443
(SRS) .....	358	Completeness under Different Types	
Software Design .....	359	of Reduction .....	444
Software Design Concepts .....	361	Non-Deterministic Algorithm .....	444
Use of ‘Information Hiding’ as a Design		Complexity of Non-Deterministic Algorithm	
Criteria for Modular Systems .....	362	(NDA Algorithm) .....	444
Functional Independence .....	363	● <b>Objective Questions</b> .....	<b>447</b>
Cohesion .....	363	<b>8. Theory of Computation and</b>	
Coupling .....	363	<b>Compilers</b> .....	<b>458–498</b>
User Interface Design .....	369	Computations .....	458
Role of Quality in Software Development .....	369	Finite Automata .....	459
Software Quality Factors .....	370	Deterministic Finite Automata .....	459
Software Quality Assurance .....	371	Non-Deterministic Finite Automata .....	459
Intermediate COCOMO .....	374	Equivalence of DFA’s and NFA’s .....	459
Software Testing .....	376	Properties of Regular Sets .....	460
Software Maintenance .....	377	Non-Deterministic Finite State Automata	
Deriving Test Cases .....	382	(NFA) .....	462
Black Box Testing .....	382	Context Free Grammars .....	463
Testing Strategies .....	384	DPDA .....	464
Alpha and Beta Testing .....	386	Languages Accepted by a PDA .....	465
Software Configuration Management .....	387	PDA and Context-Free Languages .....	466
Clean Room Software Engineering .....	388	Parse Trees .....	467
Software Re-engineering .....	388	Bottom up Parsers .....	468
● <b>Objective Questions</b> .....	<b>389</b>	Reduced Form of a Grammar .....	469
<b>7. Data Structures and</b>		Deterministic Pushdown Automata .....	469
<b>Algorithms</b> .....	<b>400–457</b>	Recursively Enumerable Sets .....	471
Data & File Structure .....	400	Enumerating a Language .....	471
Arrays .....	404	Turing Machine .....	473
Stacks .....	405	Computing with a Turing Machine .....	474
ADT of Stacks .....	406	Turing Machine as a Computer of Integer	
ADT of Queues .....	409	Functions .....	474
Queue Implementations .....	409	Computing a Partial Function with a Turing	
Other Types of Queue .....	411	Machine .....	475
Priority Queues .....	412	Variations of Turing Machines Multitape	
Linked Lists .....	413	TMS .....	475
		Linear Bounded Automata (LBA) .....	479
		Growth Rates of Functions .....	480

Asymptotic Analysis of Time and Space .....	481	Mobile Computing .....	537
NP-Hard Code Generation Problems .....	484	Mobile Middleware .....	537
Topdown Parsers .....	486	Gateway .....	537
Implementation of Reference Semantics .....	488	Mobile IP and Mobile Communication Protocol .....	538
Code Generation .....	490	Mobile Communication Protocol .....	539
Code Optimization .....	490	Communication Satellites .....	539
● <b>Objective Questions</b> .....	<b>491</b>	Low-Earth Orbit Satellites .....	541
<b>9. Data Communication and Computer Networks</b> .....	<b>499–562</b>	Wireless Geolocation Systems .....	542
Data Communication & Transmission .....	499	Wireless Transmission .....	542
Basics of Data Communications .....	499	Radio Transmission .....	542
Data Transmission Signals .....	500	Microwave Transmission .....	543
Difference Between Analog and Digital Signal .....	501	Lightwave Transmission .....	543
Modes of Transmission .....	501	Wireless Local Loops .....	545
Types of Data Transmission .....	501	Cloud Computing and IoT .....	546
Methods of Data Transmission .....	502	● <b>Objective Questions</b> .....	<b>550</b>
Multiplexing .....	503	<b>10. Artificial Intelligence</b> .....	<b>563–608</b>
Transmission Media .....	504	Artificial Intelligence .....	563
Computer Networks .....	506	Artificial Intelligence Techniques .....	563
Components of a Network .....	507	Artificial Intelligence Programming .....	564
Local Area Networks .....	507	Understanding of the Artificial Intelligence .....	564
Metropolitan Area Networks .....	509	State Space Representation .....	565
Wide Area Networks .....	510	Algorithm for Solving State-Space Problems .....	566
Wireless Networks .....	511	Basic Search Techniques .....	567
Internet .....	512	Heuristic Search .....	568
Networks Connecting Devices .....	512	Knowledge Representation and Inference .....	569
Reference Models .....	514	Semantic Nets .....	570
The TCP/IP Reference Model .....	516	Frames .....	571
Switching Techniques .....	518	Scripts .....	571
Functions of OSI and TCP/IP Layers .....	520	Expert System .....	572
TCP/IP Model .....	521	Components of Expert System .....	573
Polling .....	524	Levels of Knowledge Representation .....	574
Virtual Circuits .....	524	Planning and Search .....	575
Tunneling .....	525	Planning the Implementation .....	576
Fragmentation .....	525	Natural Language Processing .....	577
Routing .....	526	Writing a Grammar .....	578
Routing Algorithms .....	527	Grammars in Prolog .....	580
Conjestion Control .....	528	Parsers .....	580
World Wide Web (WWW) .....	529	Semantics and Pragmatics .....	581
Architecture .....	529	Multi Agent Systems .....	582
DNS – The Domain Name System .....	529	MAS Features .....	583
Name Servers .....	530	Fuzzy Sets .....	584
Electronic Mail .....	531	Membership Functions .....	585
Architecture and Services .....	531	Genetic Algorithms (GA) .....	588
Network Security .....	532	Artificial Neural Networks .....	589
Security Policy .....	533	Supervised Learning .....	593
Cryptography .....	534	Unsupervised Learning .....	593
Integrity Mechanisms (Secret Key) .....	534	Reinforcement Learning .....	593
Public Key Encryption .....	535	Single Perception .....	594
Authentication with Digital Signatures .....	535	Multilayer Perceptron .....	594
Mobile Technology .....	536	Self Organizing Maps .....	594
GSM .....	536	Hopfield Network .....	595
CDMA .....	536	● <b>Objective Questions</b> .....	<b>595</b>
